

LABORATORY SAFETY

Duration: 2 Days

INTRODUCTION

The purpose of this course is to enhance the employee's current skills in the laboratory environment, with SHE knowledge, this is to improve productivity and minimise losses in the organisation. The laboratory safety course is developed to enhance legal compliance by emphasising the identification and control of risks, by means of:

- Focusing the employee on his/her responsibilities;
- Training in Hazard Identification and Risk Control principles as well as training relating to responsibilities in the OHS Act and relevant Regulations;
- Training relating to workplace safety procedures;
- Training the employee with respect to the basics of chemicals;
- Training the employee with respect to the typical Chemicals of the client;
- Training relating to general emergency procedures and disaster anticipation.
